### Part 2e. Description of Environment

Provide a **high-level** description of the environment covered by this assessment.

*For example:*

- *Connections into and out of the cardholder data environment (CDE).*
- *Critical system components within the CDE, such as POS devices, databases, web servers, etc., and any other necessary payment components, as applicable.*

RMS uses Payment Gateways and VGS (Very Good Security, Inc.) PCI Proxy to prevent RMS systems from capturing, transmitting or storing credit card data.

In cases where a customer uses a Payment Gateway, the gateway's Hosted Payment Page is used so the customer is always interacting directly with the Payment Gateway hosted solutions and never entering credit card data into RMS systems.

In cases where a customer does not use a Payment Gateway, or a third party (eg. OTA) sends messages containing credit card data to RMS, VGS is used to intercept the message, capture and replace the credit card data with a token before it is forwarded to RMS systems.

Does your business use network segmentation to affect the scope of your PCI DSS environment?

*(Refer to "Network Segmentation" section of PCI DSS for guidance on network segmentation)*

Yes  No
